

Final posterior on θ_1 (adaptive to $\text{eps}=0.1$) vs exact

Method  Exact  RE-ABC-SMC^2 (gaussian)  ABC-SMC

Final posterior on θ_2 (adaptive to $\text{eps}=0.1$) vs exact

Method  Exact  RE-ABC-SMC^2 (gaussian)  ABC-SMC

Joint posterior vs exact (black contours; x = true theta)

Method ● RE-ABC-SMC² (gaussian) ● ABC-SMC
